

KSAM and MPE Flat Files Available in the DSA-E

Overview

KSAM and MPE flat files are available in the DSA-E environment for data access using the OLE DB driver. The files in this environment are the files that were identified¹ by the colleges as being used with OLE access.

Files are refreshed daily from the SBCTC Administrative Systems environment at 3:00 a.m.

The table below lists the files that are currently available in the DSA-E.

File	Group
BA1290S*	DATA
GA1300S*	DATA
GA1301S*	DATA
PS2101S*	DATA
SLRSX4	GEN
SM5003S	DATA
GA1319S	DATA

* Indicates that this file may have multiple copies, each suffixed with a number. For example, for BA1290S* it is possible to have BA1290S, BA1290S1, BA1290S2, etc. These are created on the OLTP system to provide aged versions of a file. Each sequential file that is available on a college's account in the OLTP process is included in the nightly refresh process.

Adding Additional Files for OLE-DB Access

Requests to include additional files in the DSA-E environment can be submitted for review to [SBCTC-ITD Customer Support](#). Please include details such as the file name and a brief explanation on how this file will be used.

Access to other files that are created in your SBCTC Administrative System environment will continue to be available using the UDALink Reporter (DX Reports). Browse to the Database Reporting webpage for product documentation.
